

## Knowing what's active in your IT environment is fundamental for security.

Cyber crime is big business and attackers are on the lookout for new ways to exploit your company's network and infrastructure for financial gain. Most businesses however have little or no central oversight of what's happening in their IT environment.

To stay secure, your business should keep a constant watch over its IT assets.

Vulnerability Management is a core part of iomart's Managed Security Service (iMSS), providing continuous discovery of your network and infrastructure to pinpoint the most critical threats. Built on world-leading compliance and security technology, iMSS detects and protects against cyber attacks, saving on the substantial cost, resource and deployment issues associated with a traditional software solution.

## Vulnerability Scan

### Our FREE Vulnerability Scan

iomart will carry out a vulnerability scan\* on your most critical devices, at no cost to you. The scan is a non-destructive form of testing that provides immediate feedback on the health and security of your IT assets. The devices you might consider for scanning include: public IP addresses, domain names, virtual and physical servers.

Depending on the type of devices iomart will either supply and/or deploy the following:

- **Endpoint agent:**

The cloud agent is packaged and qualified for deployment on a variety of operating systems. It requires secure outbound access on port 443.

- **External scanning:**

To scan internet facing assets we require a list of your public facing IP addresses and require you to complete a Letter of Authorisation allowing us to scan them.

### The Report

Once the scans have been completed you will receive a report showing you where the weaknesses are. The report will give you advice on how to plug the gaps. Based on that information your IT team can take direct action to improve your security posture and reduce the risk of a breach.

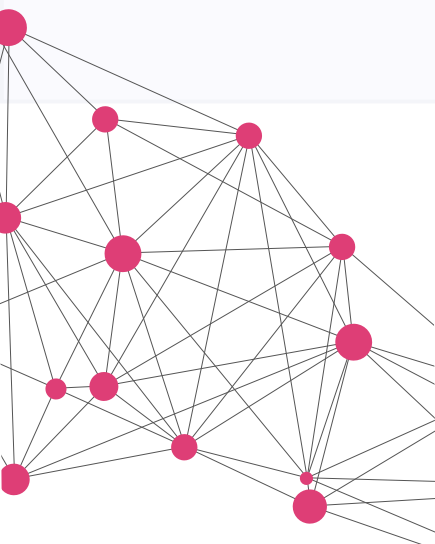

### Further remediation

iomart's Managed Security Service (iMSS) provides a fully managed and monitored security solution. If, following the free vulnerability scan, your business wants iomart to carry out any remediation, this can be discussed with our managed security team.

## The Value of Vulnerability Scanning

Our vulnerability scanning service combines world-leading technology with our security and infrastructure expertise to give you instant visibility into where your IT systems might be at risk.

It forms part of the comprehensive managed security service that protects our customers' systems 24/7.

### Benefits

	<p><b>Visibility</b></p> <p>Identifies vulnerabilities, prioritises remediation and assesses IT compliance.</p>		<p><b>Accurate, prioritised results</b></p> <p>Features a powerful data analysis, correlation and reporting engine.</p>
	<p><b>Comprehensive protection</b></p> <p>Monitors your environment, and flags anomalies and compromise indicators.</p>		<p><b>More predictable TCO</b></p> <p>No capital expenditure, extra human resources, infrastructure or software to deploy and manage.</p>

### Why choose iomart?

#### Experience

iomart has been managing customers' critical IT infrastructure for over 20 years.

#### Expertise

We are experts in security, infrastructure, monitoring, compliance, governance and the technologies needed to build effective defences.

#### Technology

We work with world-class security vendors to create the most appropriate security service for your business.

#### Simplicity

Our managed security service offers a single solution to defend and protect organisations in an increasingly complex threat landscape.

#### Action

We take swift action to address threats and vulnerabilities, reinforce defences and stop attacks.

#### Visibility

We give our customers visibility of the work we are doing via a control panel and a weekly executive threat report.

#### Support

We provide a fully managed, SLA-driven service, 24/7/365.

#### Accreditations

iomart offers the most secure and industry compliant managed security services on the market.

#### PAYG

Flexible, pay monthly solutions, which can scale quickly, so you only pay for what you are protecting.

**Know where your vulnerabilities are before the hackers do**
